

AIR

Agentic Incident Response

From signals to action. Faster resolution. Lower MTTR.

PROBLEM STATEMENT

Traditional SRE remains reactive and manual

Fragmented tools and expertise-dependent workflows delay confident action.

01	02	03	04
Reactive by design	Fragmented context	Manual operational toil	Expertise bottleneck
Work begins after an incident is detected—often while customer impact is already unfolding.	Alerts, dashboards, logs, Kubernetes, runbooks and scripts are reviewed across disconnected tools.	Root-cause analysis, capacity planning and performance diagnosis rely on repetitive human effort.	Resolution speed and consistency depend on the availability of experienced engineers.

Impact: slower resolution, inconsistent response quality, and less capacity for proactive reliability work.

PRODUCT VISION

AI SRE moves reliability from reactive to proactive

A context-aware reliability platform that continuously understands, predicts, acts and improves.

01 · Reactive → Proactive	02 · Manual → Intelligent	03 · Siloed → Unified
Predict emerging incidents and capacity risks before customer impact.	Analyze signals continuously, identify probable causes and recommend the next best action.	Correlate metrics, logs, traces, changes, Kubernetes and runbooks in one operational context.
04 · After impact → Prevent impact	05 · Expert-dependent → AI-amplified	06 · Static → Self-improving
Use adaptive automation and learning to strengthen resilience over time.	Give every engineer expert context, guidance and evidence while keeping humans in control.	Learn from outcomes to continuously improve alerts, runbooks, recommendations and automation.

Product vision: fewer incidents, faster decisions, lower toil and continuously improving reliability.

BUSINESS BENEFITS

How AI SRE creates measurable business impact

50%	Stronger SLA performance	Lower operating cost	Scalable SRE capacity	Greater customer trust
Target MTTR reduction	Evidence-backed resolution lowers breach risk and protects service commitments.	Reduce senior-engineer time spent on repetitive investigation and triage.	Handle more incidents without proportional headcount growth.	Faster recovery protects customer experience and confidence.
Faster resolution reduces downtime, disruption and revenue risk.
